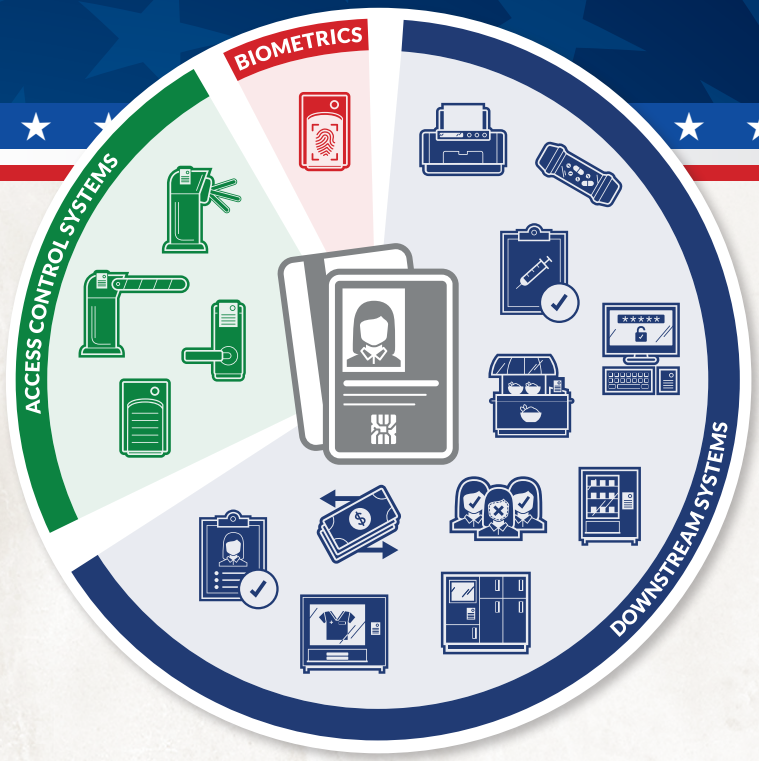
Secure Credential Issuance



When security is of the highest importance, don't use a universal credential... USE YOUR OWN EXCLUSIVE, SECURE KEY!

Having security concerns about the VULNERABILITY of your access control system?

Finding what once was "proprietary" technology is no longer proprietary and that your access card can now be fraudulently duplicated using an inexpensive proximity card programmer?

At K&A, we have the perfect SECURE CREDENTIAL ISSUANCE solution for you!

Using open architecture smart card technology combined with custom encryption keys designed specifically for your installation, **we can deliver a completely secure credential that is actually proprietary to you!**

Serving as the custodian for some of the biggest names in the financial, education and healthcare sectors, we have successfully designed, deployed and presently support MIFARE DESFire EV1 / EV2 smart card solutions **incorporating diversified key sets that completely protect your ID badge.**

Imagine having an open architecture secure credential with custom **keys that can only be used within your domain.** You are no longer pigeonholed to specific manufacturers since the technology is not manufacturer specific– allowing you to leverage your buying power and keeping security as the highest priority.

YOU own the secure keys.
YOU control your future roadmap.

Multiple applications can be encoded to your smart card, each with its own unique custom key set, allowing your credential to be used for a wide variety of secure transactions.
