

Automated Solutions for Secure Credentialing

K&A modernizes automated credentialing by streamlining every step, from **visitor registration** to **remote photo capture** and **badge issuance**.

- ✓ Automate the process.
- ✓ Reduce the workload.
- ✓ Scale with confidence.

A More Efficient Credentialing Workflow

Many traditional badging environments still rely on disconnected systems, **manual processes**, and **labor-intensive workflows** that create delays, increase administrative overhead, and limit visibility across operations.

We aim to change all that with automated credentialing.

AUTOMATION POWERED BY AI

AI-enhanced technologies make life easier by **streamlining visitor registration**, **automating photo compliance validation**, and enabling **cloud-based credential issuance**. All of these solutions reduce manual effort while improving efficiency, accuracy, and integration throughout the credentialing process.

K&A works alongside your team to transform any complex badging workflow into an efficient, **automated credentialing ecosystem**.
